

CD-ROM LABEL

Note to designers

- The artwork you create for the face of the CD will be silk screened on the metallic reflective surface of the CD-ROM. If you are using screens and/or halftones, your artwork may be difficult to see once on the CD. If you design your artwork that requires a white flood background, this can be done for an additional charge.
- Although it is not our responsibility, we will do our best to notify you if we think there may be problems with your artwork.
- The Omnipress Logo and the Acrobat Logo can be repositioned but NOT RESIZED.
- The copyright tag can be repositioned if needed to better work with your layout design. This copyright protects all entities within this product (it is intended to be positioned independently from your logo and information).
- Do NOT remove registration marks from the page.
